## PROFESSIONAL EXPERIENCE

**Splunk** San Jose, California
*Staff Applied AI Scientist* 2026/01 –

- Time Series Anomaly Detection

  My research focuses on adapting time series foundation models (TSFMs), particularly the Cisco Time Series Model (CTSM), to time series anomaly detection. I investigate forecasting-based and embedding-based anomaly detection methods, including the design and training of auxiliary models that leverage CTSM forecasts, learned representations, or combinations of both. The resulting methods rank among the top-performing approaches on public time-series anomaly detection benchmarks, demonstrating CTSM's effectiveness as a general-purpose backbone across diverse domains and anomaly types.

Supervisor: Abhinav Mathur

**Visa Research** Foster City, California
*Staff Research Scientist → Senior Research Scientist* 8 Years

- Time Series Data Mining

  Developed and applied advanced machine learning models tailored for time series data. My research and implementation efforts focused on extracting critical insights by leveraging techniques in deep learning, foundation models, and matrix profile. This work included extensive application of methods for time series forecasting, spatial-temporal forecasting, classification/regression, multi-future prediction, multi-model learning, online learning, motif/discord mining, and anomaly detection.
- Machine Learning for Tabular Data

  Led research and prototyping to advance foundation models and sequential modeling for high-volume tabular transaction data. Developed a novel foundation model that simultaneously solves fraud detection, recommendation, and stand-in processing problems. My work involved the end-to-end process: processing massive datasets (over 46 billion records), designing, implementing, training, and evaluating models at real-world scale to ensure their robustness and scalability.

I published *59 peer-reviewed papers* and *45 patents* at Visa.
Supervisor: Wei Zhang, Mahashweta Das, Yiwei Cai

**University of California, Riverside (UCR)** Riverside, California
*Research Assistant* 3 Years

- All Pairs Similarity Search for Time Series Subsequences (Matrix Profile)

  The all-pairs-similarity-search (or similarity join) problem has been extensively studied for text and a handful of other data types. However, there has been little progress on similarity joins for time series subsequences. The goal of the project is to develop an efficient/scalable algorithm solving the similarity join problem for time series data and show the utility of such algorithm when it's treated as a primitive operation for time series. The application of time series join includes visualization, motif/discord mining, clustering, etc.

I published *19 peer-reviewed papers* at UCR.
Supervisor: Prof. Eamonn Keogh

**Research Center for IT Innovation (CITI), Academia Sinica** Taipei, Taiwan
*Research Assistant* 2 Years

- Audio Word Representation of Audio Signals

  Audio word (AW) representation symbolizes any local audio event as a codeword within a pre-constructed dictionary. Over the course of the project, I have conducted a systematic evaluation with various AW extracting configurations on audio classification/auto-tagging systems. Based on the result of the systematic evaluation, I have proposed a framework that aims to standardize the modularization of the AW representation extraction. I have also examined the possibility of incorporating various ideas (e.g., multi-scale feature learning, bagging) into the AW extraction process to learn better AW representation.

  I published *8 peer-reviewed papers* at CITI.
  Supervisor: Prof. Yi-Hsuan Yang

## HONORS, AWARDS, AND SERVICE

- h-index: 31 | citations: 7,001 (Google Scholar, as of 8/21/2026)
- Honorable mention for 2019 SIGKDD doctoral dissertation award.
- First place in AALTD' 16 time-series classification challenge.

## EDUCATION

**University of California, Riverside (UCR)**
Ph.D. in Computer Science

**University of California, Los Angeles (UCLA)**
